

SEP1/Course Assignment 1 in RWD1 S18 - **Deadline: 18/03-17 @ 23:59.**

VIAFit – fitness center (Focus: HTML & CSS)

VIAFit is a small, but relatively successful fitness center, and we are going to create a webpage as one of the steps to move VIAFit into the digital age. The webpage should be designed to attract new members to VIAFit and have information for existing members. The webpage is part of your SEP1 project (Unless you are GBE or exchange).

- 1) Make the front page of VIAFit.
 - a. The costumer drew a design sketch at a meeting of an idea for layout of the front page and you should try to meet his wishes; however, you are allowed to be creative (the costumer does not always know what he wants). The picture from the meeting is included below.
 - b. The front page should have a navigation bar with links to the different content, and should at least contain links and webpages for the following:
 - i. The different fitness classes that is offered at VIAFit.
 - ii. Information about the fitness instructors (with pictures and email links - the members of the SEP group are fitness instructors for VIAFit).
 - iii. An “about page” with a description of VIAFit, opening times and contact information.
 - iv. For your SEP1 project, you have to develop the full webpage and include more topics.
- 2) Use CSS to organize and style the content.
- 3) “Borrow” pictures from the internet.
- 4) Maybe you want to dazzle the costumer by including media (sound, video) on the webpage.
- 5) No in-line styling allowed (be professional).
- 6) No JavaScript allowed - only HTML and CSS.
- 7) Validate all files and correct errors before handing in.

Hand-in in one packed (preferably .zip) on WISEflow. Only one hand-in per group. Remember all group members name on the hand-in. Your group is the same as for SEP1. For exchange and other students that are not doing SEP1 - form groups of 3-4 people within your class.

Have fun 😊
